Scrum Vision

- Investment Broker is a product in an investment market that will provide the possibility to check the stock/crypto market for forward thinking individuals who experienced struggle investing money in the stock/crypto market unlike other similar products, our product has a better readability.

- By the second quarter this year we should see a few people who registered on our app as a validator that Investment Broker has become the market leader due to its good readability.

Sprint Goals:

1. User Registration and Account Management:

   - Implement a user registration system to allow new users to sign up and create accounts.

   - Develop an account management feature that enables users to update their personal information, set preferences, and manage their security settings.

   - Integrate a secure authentication mechanism, such as two-factor authentication, to enhance user account security.

2. Real-time Market Data and Trading Functionality:

   - Integrate with reliable market data providers to fetch real-time stock and cryptocurrency prices.

   - Implement a trading functionality that allows users to place buy and sell orders for stocks and cryptocurrencies.

   - Develop order management features, including order tracking, order history, and order cancellation.

3. Portfolio Tracking and Reporting:

   - Build a portfolio tracking system that enables users to monitor their holdings of stocks and cryptocurrencies in real-time.

   - Implement performance tracking features, such as calculating gains/losses, percentage returns, and portfolio value.

   - Generate comprehensive portfolio reports that provide users with insights into their investments, including visual charts and analytics.
